ISCHEBECK TITAN

Case Study

HD FAB at Buchanan Wharf, Scotland

.....the most effective solution for this 7-storey concrete core construction project as the client needed ....

Project name: Buchanan Wharf

Project location: Scotland

Main Contractor: Graham

Project Background:

This project was the first time our increasingly popular HD FAB solution was used in Scotland. The planning, design and assistance provided by our various teams resulted in another successful project completed on time for a long-standing client, who was impressed again by another of our innovations.

HD FAB was chosen as the most effective solution for this 7-storey concrete core construction project as the client needed a pre-assembled solution for both internal and external platforms, as well as a tried and tested safe and time-efficient system. In addition to the effectiveness of the solution, the client also needed full technical and on-site support services that we pride ourselves on at Ischebeck Titan.

To ensure the best possible solution was provided to the client, our highly experienced team of in-house designers, who are experts on the Ischebeck Titan product range, were on hand to offer our full design service. The designs produced by the team aided with the smooth running of the project and provided an effective, easy-to-use and safe solution to the client and everyone involved.

Upon the first delivery of HD FAB to the project location, our on-site technicians and assistant team were on hand to answer any questions and make sure the delivery and installation ran smoothly. The on-site team were available to assist the client for the duration of the project to answer any queries and offer advice whenever required.

Being quick and simple to construct and easy to move, the HD FAB system allowed for a quick turnaround from floor to floor to meet the tight program time on the project.

What is HD FAB?

Ischebeck Titan Heavy Duty Folding Access Bracket (HD FAB) is a simple, easy to erect, use and dismantle climbing formwork/access platform that is in direct relation to the popular FAB access platform. TITAN HD FAB provides a shutter rollback system that can accommodate various shutter solutions from traditional soldiers and aluminium shutters to proprietary panel systems.

Lightweight and easy to install, TITAN HD FAB can be delivered pre-assembled and flat packed to site. With a 2.3m wide working deck and high level of edge protection, HD FAB is engineered to give total confidence in safety and security.
